

# Course Project

Scrollytelling 2020

Great job so far! We recommend listening to all the course lectures before starting on the course project, but feel free to start early, or even right away. You may also want to review both the “code” and “code\_transitions” versions of the scrollytelling example web page before getting started.

In the project for this course you will use the United Nations World Happiness Report to tell a story about which of the world’s nations are becoming happier. You will apply the knowledge gained in the course lectures to create an engaging visual essay to use on your portfolio.

The necessary images and starter code for the project are provided. All you need to do is apply what you learned in the course lectures to fill in the missing bits of Javascript that turn the webpage from a static snooze-fest into a memorable experience for your reader.

The challenge is simple, at each @TODO in the unsolved code, fill in the code needed to get the story to function. If you get really stuck, look in the solved folder, and reference the completed code.

Search for “TODO” in your text editor to find where there is code missing. If you have a question, or are stumped on a problem, post your question on the course forum, here:

<https://www.thrum.engineering/scrollytellingforum/questions>

To get started on the project:

- 1) Download the Scrollytelling\_Course\_Project zip folder, and unzip it.
- 2) Start by working with the unsolved index.html file. At each @TODO, there is code missing. It’s your job to fill in the code that’s missing.
